

### X3 Front Knuckle

- Remove and install the knuckle according to factory specifications.
- Torque all fasteners to factory spec. Except as noted below.
- Torque spec for the ARP bolt is **53 ft-lbs.** Always use an accurate, calibrated torque wrench.
  - Do not exceed 60 ft-lbs or fall below 48 ft-lbs.
  - For race applications apply blue Loctite to the threads.
  - Tighten the nut side only. Never torque the bolt head.
- Ensure axles are tightened to at least 180 ft-lbs regardless of the brand of axle or hubs.

Remember: Performance Matters!
